Spick Florian

SRE · PLATFORM ENGINEER · KUBERNETES EXPERT

florianspk@gmail.com | 06 28 26 56 37 | florianspk.fr | @florian-spick

CERTIFICATIONS

CKA — Certified Kubernetes Administrator

CKS — Certified Kubernetes Security Specialist

CAPA — Certified Argo Project Associate

Google Cloud — Manage Kubernetes in Google Cloud

CORE SKILLS

Kubernetes & Platform
Kubernetes · ArgoCD · Helm · Talos · VMware Tanzu · Kubeflow

GPU / ML Infrastructure
NVIDIA GPU Operator · MIG dynamic · vLLM · KV cache offload

Infrastructure as Code & Automation
Terraform · Ansible · Vagrant · pfSense · Proxmox

Storage
LINSTOR · DRBD · Velero · CSI snapshots · Netapp Trident

Observability
Prometheus · Grafana · Loki · Alertmanager · PMM · SLA/SLO

Data / Messaging
PostgreSQL · MySQL · Kafka · Redis · RabbitMQ · S3

Dev & Security
Go · Python · PHP · Docker · Jenkins · Snyk · Authentik

EDUCATION

Univ. de Technologie de Troyes
MSc — Information Systems Security
2022–2023

CESI
Software Engineering & DevOps Manager
2020–2022

IUT Charlemagne Nancy
Associate Degree in Computer Science (DUT)
2018–2020

LANGUAGES

Français
Langue maternelle

Anglais
TOEIC (B2 level)

PROFILE

Platform Engineer / Site Reliability Engineer specialized in **Kubernetes** and **Cloud Native**. My focus is **cloud migration, GitOps and cluster security**. I work end-to-end across infrastructure, from **design** to **production**, with a highly pragmatic approach: I **prototype**, I **test** (notably in my homelab), then I roll it out to **production**.

EXPERIENCE

Site Reliability Engineer
2023 – Présent

Equasens · Nancy, France

- **Administration** and **operation** of a large-scale **production** environment **(500+ VMs, 8 Kubernetes clusters** across **two data centers**)
- **Migration** of **applications** and **databases** to containerized, **cloud-native architectures**
- Built **GitOps (ArgoCD)** and CI/CD pipelines to **automate deployments** and **improve delivery cycles (DORA metrics)**
- **Monitoring**, performance analysis and **incident resolution** on highly available **distributed systems**
- **Designed** and implemented a **Terraform/Ansible IaC** pipeline for automated deployment of **Kubernetes clusters** and **highly available databases**
- Managed **cloud environments** and deployed **performance-critical workloads (NVIDIA H200, vLLM, MIG partitioning)**
- **Technical reference** for application teams on **cloud-native middleware** architectures **(Data Lakehouse, CDC with Kafka/Debezium)**

DevOps Engineer
2020 - 2023

Inovea Conseil · Nancy, France

- **Developed** and **integrated** a **CI/CD** pipeline, strengthening code quality and **IT system security**
- Set up containerized **development environments** with **Docker and dynamic Docker Compose**, improving **reproducibility** and **onboarding**
- Analyzed **client needs** and evolved the **Dolibarr ERP**, adding **features** tailored to **business use cases**
- Formalized **procedures** and rolled out **DevSecOps** best practices, standardizing development and security processes

HomeLab — WheezyLab

Projet personnel

- Designed a **homelab**: **Proxmox** cluster with a dedicated network and **automated Terraform** deployment of a Kubernetes cluster on **Talos Linux**
- Built a **GitOps** ecosystem: **multi-cluster** management with **ArgoCD** and **Renovate**
- Hyperconverged **distributed storage** with **LINSTOR (DRBD)** exposed via **CSI**, with **snapshots** and **Velero** backups to externalized cold storage
- **Developed** an **open-source tool** for the **Talos Kubernetes** ecosystem **(Go),** published on GitHub
